

The DAFO 4 Softy uses a soft foam liner to provide more comfortable control for patients with challenging or boney foot anatomy, difficult-to-correct feet, or those prone to irritation at pressure points. This is combined with the same supramalleolar trimlines as the standard DAFO 4, offering full wraparound control with no restriction to ankle movement in the sagittal plane. With the ideal level of control for feet that are poorly positioned (whether due to low or high tone), but where no plantarflexion/dorsiflexion restriction is required, the DAFO 4 Softy is particularly well suited for younger/smaller patients whose feet have collapsed into moderate pronation due to low muscle tone.

## Key Features

### Custom-fabricated from a cast

### Supramalleolar trimline

allow full plantarflexion and dorsiflexion

### Full wraparound shell

for flexible control of foot position and alignment

### Defined plantar surface contours

### Softy Liner

made of foam provides more comfortable control of feet that are difficult to align or have sensitive boney prominences

### Optional anterior and/or posterior straps

provide some medial/lateral control

## Designed for patients who:

- Have excessive pronation and/or supination.
- Have delayed development with very low tone pronation and sensory issues.
- Need high levels of specific foot correction but have adequate ankle control for their functional level.
- Engage in frequent floor activities requiring free ankle movement.
- Have difficult-to-correct feet or feet with sensitive boney prominences.
- Require extra padding for feet with sensitive boney prominences.
