

# DAFO<sup>®</sup> 4

*PF free, DF free*

The DAFO 4 is a custom-fabricated supramalleolar orthosis that offers full wraparound control of foot position with no restriction to ankle movement in the sagittal plane. It offers an ideal level of control for feet that are poorly positioned, whether due to low or high tone, but where ankle function is good enough that no plantarflexion/dorsiflexion restriction is required. With the ideal level of control for feet that are poorly positioned (whether due to low or high tone), but where no plantarflexion/dorsiflexion restriction is required, the DAFO 4 is particularly well suited for younger/smaller patients whose feet have collapsed into moderate pronation due to low muscle tone.

## Key Features

### Custom-fabricated from a cast

**Supramalleolar trimline**  
allow full plantarflexion and dorsiflexion

**Fully integrated padding**

**Defined plantar surface contours**

**Full wraparound shell**  
for flexible control of foot position and alignment

**Optional anterior and/or posterior straps**  
provide some medial/lateral control

## Designed for patients who:

- Have excessive pronation and/or supination.
- Have delayed development with very low tone pronation and sensory issues.
- Need high levels of specific foot correction but have adequate ankle control for their functional level.
- Engage in frequent floor activities requiring free ankle movement.

Anterior/Posterior strap

Posterior strap
