

DAFO[®] 5

Maximum control foot orthosis

The DAFO 5 is a custom-fabricated, UCBL-style foot orthosis that provides comfort and flexible containment of the forefoot and heel. There are two trimlines available for the toe shelf: the standard option is more flexible, with the plantar surface plastic shell trimmed proximal to the 1st met head, and distal to the 5th, transitioning into a dense foam sole. It can also be ordered with a full-length plastic shell trimmed distal to the toes, if preferred. Submalleolar trimlines offer a solution for patients who require more control than a shoe insert but don't need the support of an above-ankle orthosis.

Key Features

- Custom-fabricated from cast
- Low profile dorsal trimlines for ease of shoe fit
- Partial heel and midfoot containment
- Arch fill and medial heel stabilization
- Defined plantar surface contours
- Easy toe-off distal trimlines

Designed for patients who:

- Present with moderate pronation and associated gait instability.
- Need more containment than is possible with a lower trimline shoe insert.

Standard option: Very flexible

Full length plastic
