

DAFO[®] Hemi

AFO for patients with CVA-TBI, PF resist, DF assist

The DAFO Hemi is designed for adult patients with hemiparesis who exhibit diminished control of foot placement. The reinforced posterior upright is strong but light. This brace style includes an elongated instep strap for easier one-handed donning. Two trimline options are available: Trimline A offers maximum control for patients with stronger tone and/or strong knee hyperextension. Trimline B is more flexible and gives minimum to moderate control of plantarflexion.

Key Features

Custom-fabricated from a cast

Fully integrated padding

Hemi-style instep strap

helps single-handed donning

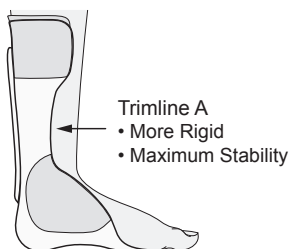

Defined plantar surface contours

Two trimline options

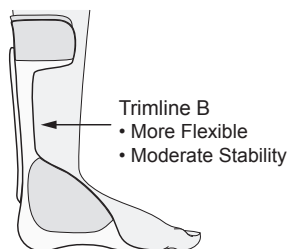

for moderate to maximum PF resist

Designed for patients who:

- Have some voluntary dorsiflexion, but fatigue easily and are at risk of toe dragging.
- Have good medial/lateral foot stability.

Trimline A
• More Rigid
• Maximum Stability

Trimline B
• More Flexible
• Moderate Stability
