

# DAFO<sup>®</sup> Turbo

PF block, DF block

The DAFO Turbo is a two-part design consisting of a thin, wraparound SMO inner liner combined with a rigid outer AFO upright that effectively blocks ankle movement. The DAFO Turbo provides one of the highest levels of ankle/foot control available in the DAFO line of orthoses, with strong ankle plantarflexion and dorsiflexion block. The DAFO Turbo is effective for patients who present with a crouched posture with some positional correction available at the hip, knee, and ankle. This design is also an effective solid-ankle brace.

## Key Features

**Custom-fabricated from a cast**

**Fully integrated padding**

**Stiff, proximal upright**

provides strength and stability, blocking plantarflexion and dorsiflexion

**Thin, flexible, wraparound inner shell**

for streamlined control of foot position and alignment

**Defined plantar surface contours**

**Extremely durable brace**

for larger patients (over 65 lbs.)

## Designed for patients who:

- Present with moderate to strong crouching/excess dorsiflexion.
- Are in need of a solid-ankle brace design to limit ankle movement to a fixed position.
- Show improved crouched stance when knee is manually extended.
- Have sufficient hip, knee, and ankle range to allow correction to the targeted position.
- Have matured to the point where their weight and size have exceeded their strength, resulting in decreasing ambulation.
