DAFO® TwoStep

PF resist, DF free

The DAFO TwoStep is a two-piece design that combines a wraparound inner liner with a flexible posterior upright. It offers moderate plantarflexion resist with free dorsiflexion movement. It provides excellent hindfoot and forefoot control, as well as medial/lateral stability in both swing and stance phases. The flexible upright of the DAFO TwoStep provides assistance with consistent dorsiflexion. It resists excessive plantarflexion but supports plantarflexion at heel strike and push-off.

Key Features

Custom-fabricated from a cast

Fully integrated padding

Flexible, posterior upright
resists excess plantarflexion but supports plantarflexion at heel strike and push-off and allows free dorsiflexion

Full wraparound shell
for flexible control of foot position and alignment

Defined plantar surface contours

Designed for patients who:

- Have strong fixing patterns in supination or pronation.
- Have some voluntary control that is very useful and can use the flexible control to increase overall function.
- Have mild knee hyperextension.
- Need assistance in managing knee position in flexion and/or extension.
