

JumpStart® Bunny®

CASCADE®
daFO®

SMO trimline with proximal PF resist strap.

The JumpStart Bunny was developed to help young patients with fully-correctable pronation, supination, or swing phase inconsistency to realign their base of support for improved stability in standing and walking. Full wrap-around flexible support encompasses the foot and ankle for pronation and supination control. A well-defined plantar surface and wrap-around compression provide proprioceptive input. Proximal strap(s) provides an aid to frontal plane control and influence mild resistance to excess sagittal plane motion. Solid outer foundation adds extra arch support and heel stability.

Key Features

High proximal "ears"

provide additional medial/lateral control.

Proximal posterior elastic strap

adds to frontal plane control and offers mild resistance to excess plantarflexion. Option to replace posterior strap with anterior/posterior wrap-around strap.

Solid outer foundation

provides additional support and heel stabilization.

Full wrap inner liner

made from soft, thin polyethylene plastic allows full alignment control of the heel, mid-foot, and forefoot.

Choice of two outer foundation materials

Polyethylene for moderate flexibility or co-poly for firm support.

Prefabricated

sized by measurement using the Fast Fit sizing jig.

Widths: Wide and Narrow

Sizes: 4.00 – 9 inches (0.25 inch increments)

Designed for patients who:

- Exhibit a fully correctable foot position and fit within the product size range.
- Present with moderate to strong pronation or supination and associated gait instability.
- May benefit from the sensory feedback provided by a fully contoured foot bed.
- Demonstrate mild swing phase instability, or excess plantarflexion presented as mild toe walking or knee hyperextension.
- Require some resistance to plantarflexion.

Wrap-around strap

Co-poly

No casting needed!
